CASH RECEIPTS FROM FARMING IN OHIO  
1963

Cash receipts to Ohio farmers from marketings and government payments totaled \$1,110,164,000 in 1963. Cash receipts from the sale of farm commodities were up slightly from the revised 1962 figure but government payments dropped 16 percent. Total cash income was one percent lower because of the lower government payments.

Farm marketings amounted to \$1,060,102,000 in 1963. Cash receipts from the sale of livestock and livestock products totaled \$617,362,000 or 58.2 percent of the farm marketing total. The marketings of crops accounted for \$442,740,000 or 41.8 percent of the farm marketing totals for 1963 in Ohio. Cash receipts from crops climbed five percent above the revised 1962 figure while the receipts from livestock and livestock products declined three percent from a year earlier.

Record yields of corn, wheat and oats along with relatively favorable market prices resulted in sharp increases of cash receipts from these crops in 1963. These higher cash receipts resulted in a record large amount received by Ohio farmers from the sale of crops. Cash receipts from fruit and nuts were considerably below 1962 because of an abnormally low fruit crop. The amount received from the remaining crops had little change from the previous year although cash receipts from popcorn were down because of a large cutback in acreage.

Cash receipts from livestock and livestock products were lower in 1963 because of declines in the receipts from meat animals. The major decline came in lower income from hogs -- down eight percent from a year earlier. Dairy products cash receipts declined two percent and cattle and calves dropped three percent. However, cash receipts from turkeys and turkey eggs were above 1962.

The sale of dairy products again was the largest single source of income for Ohio, accounting for 20.0 percent of farm marketing cash receipts. Cattle and calves ranked second with 14.9 percent of the total followed by hog sales which accounted for 13.1 percent.

Fulton, Darke, Wood and Wayne Counties once again were the leading counties in total cash income, with each exceeding cash receipts of twenty-five million dollars in 1963. The leading counties in sales for major enterprises were: Wayne in dairy products; Fulton in cattle and calves; and Clinton in hogs.

ESTIMATED CASH RECEIPTS BY OHIO FARMERS FROM THE SALE OF  
AGRICULTURAL PRODUCTS AND FROM GOVERNMENT PAYMENTS  
1963

Procedure

Estimates of cash receipts from farm marketing in Ohio were published initially in 1927 and annually each year since 1929. County estimates of cash receipts are published as an annual bulletin by the Department of Agricultural Economics and Rural Sociology of The Ohio State University and the Ohio Agricultural Experiment Station in cooperation with the Statistical Reporting Service of the U. S. Department of Agriculture. This bulletin contains the 1963 Ohio county cash receipts estimate.

Cash receipts represent gross returns from the actual sale of crops and livestock during the calendar year. The value of home consumption and interfarm sales is not included as cash receipts. Production expenses such as feed, fertilizer and feeder animals are not subtracted from cash receipts. The addition of government payments to cash receipts provides a measure of total gross cash income from farming.

State cash receipts are also published in the August 1964, USDA Farm Income Situation - Supplement bulletin. These state totals are prepared by the Economic Research Service of the U.S. Department of Agriculture. District and county estimates are computed for the year as in previous years. Supplemental data used in arriving at county estimates were obtained from the Ohio Crop Reporting Service and the 1959 Census of Agriculture. As more complete sources of information became available, some changes in calculation become necessary from year to year. As a consequence, some items are not strictly comparable with previous years. However, these changes are relatively minor.

Prior to 1957 cash receipts from the sale of dairy cows and veal calves were included with the dairy cash receipts. Since 1957 this amount has been included with the sale of cattle and calves. The production of greenhouse vegetables was included with the cash receipts from greenhouse and nursery production prior to 1960. Since then greenhouse produced vegetables have been included with the vegetable cash receipts. The county vegetable cash receipts estimate is a combination of separate estimates for field grown vegetables and vegetables grown under glass. For purposes of ranking counties, potatoes were considered a separate crop from total vegetable cash receipts.

Included in the poultry cash receipts for 1963 are receipts from farm chickens, broilers, turkeys, and eggs. Receipts from turkey eggs and "other poultry" are included with "Other Livestock and Livestock Products." The sheep enterprise consists of returns from sheep, lambs and wool. Cash receipts from fruit crops are made up of receipts from small fruits as well as tree fruits and nuts.

Government payments amounted to \$50,062,000 or 4.5 percent of the total cash receipts in Ohio. The major portion of government payments came from the Feed Grain Program which accounted for \$31,569,000, followed by Soil Bank payments of \$8,128,000 and Conservation payment totaling \$6,320,000. Wheat Program payments, Wool Act payments and Sugar Act payments totaled \$1,869,000, \$1,163,000 and \$1,013,000 respectively. The aid provided by the personnel of the Ohio Agricultural Stabilization and Conservation Service in obtaining county data on government payments is appreciated.

Considerable variation in size exists among Ohio Counties and comparison of total cash receipts by counties considering only land area could be misleading. Therefore, the estimated cash receipts per farm and per acre have been calculated so that evaluations may be made on a comparable basis. The 1959 U. S. Census of Agriculture "number of farms" and acres of "all land in farms" were used as the basis of comparison. In some counties the per acre cash receipts are relatively low because the Census designated acres of "all land in farms" includes a considerable amount of land not cultivated and some not even used for pasture. The 1959 Census defined a farm as any tract operated as a unit of 10 or more acres, or if less than 10 acres, had sales of agricultural products totaling \$250 or more.

This bulletin provides estimates of cash receipts from sales by Ohio farmers in 1963. By counties the relative importance of various commodities would be somewhat different if the value of commodities used on farms were computed. Assuming a season average price for each commodity, the value of the crop used on farms in 1963 would have been 116 million dollars for corn, 18 million dollars for oats and 79 million dollars for hay.

TABLE I

CASH RECEIPTS FROM FARMING AND GOVERNMENT PAYMENTS, OHIO, 1930 - 1963

		Livestock and Livestock Products	Total Crops Livestock and Livestock Products	Govern- ment Payments	Cash Income and Government Payments	Percent of All Commodities
